

Sediment/Carbon Filter for Cartridge Tank	Model #	Dual Gradient Nominal Micron Ratings*
	CF3400-CT05	25 Micron/5 Micron
	CF3400-CT020	25 Micron/20 Micron

Friesian sediment/carbon filters are designed for sediment, chlorine, taste, and odor (CTO) reduction from potable water. These cartridges will not remove or kill bacteria and should not be used on microbiologically unsafe water.

Dual Gradient, Melt Blown Sediment/Carbon Filters

for water filtration applications

The dual-gradient design maximizes dirt-holding capacity while minimizing pressure loss. Featuring two distinct filtration zones: Zone 1 captures and removes larger sediment particles. Zone 2, composed of a carbon block, traps finer particles. The tighter matrix structure of Zone 2 enhances durability, eliminating the need for a separate center core.

Cartridge tank filters are available with two different micron ratings for Zone 2, providing flexibility to meet specific filtration needs.

Certified to NSF/ANSI 42 and NSF/ANSI/CAN 372.
