

## REVERSE OSMOSIS DRINKING WATER SYSTEM

### The 'RO' of the system is the secret

RO is Reverse Osmosis. This is the natural process which sets the foundation of RO systems. It may sound technical, but osmosis is a natural, organic phenomenon, a process that occurs in nature on a continuous basis. Vegetation, like trees, plants and flowers attain their nutrients by using osmosis to draw water from the soil.

The **HydroSplash RO Drinking Water System** uses a combination of filtration technologies to reduce unwanted contaminants in a water supply. This unit is designed to reduce the dissolved mineral content of the water. In the RO process, dissolved minerals are separated from the incoming water to produce the product water. The excess minerals are rinsed to drain.

### Reverse Osmosis (RO) works like this:

The pressure from a household tap forces water through a semipermeable membrane. This membrane separates the water at the molecular level. The membrane acts like a filter, assuring the RO water has substantially reduced impurities and dissolved solids. This cleaner, more refined water is then stored in a holding tank, ready at your convenience.

*The HydroSplash Reverse Osmosis (RO) Drinking Water System is an optimized to treat city water using the existing water pressure. This RO ensures premium water taste and quality. The easy twist-off, disposable filter cartridges and RO membrane assembly are designed to make installation and replacement quick, easy, and more sanitary.*

### The 'RO' of the system is the secret

- Delicious, sparkling-clear drinking water
- Convenience: fresher, cleaner water at your faucet
- Reduces single-use plastic bottles (go green)
- Pristine, flavorful coffee, tea, and juice
- Quality water for your aquarium
- Cleanly rinsed fresh fruits and vegetables
- Crystalline, harder and clearer ice cubes
- Prolong the life of your humidifier or steam iron
- Spotless glassware when rinsed with RO water
- Cost-effective: no more bottled water costs
- Better tasting soups, sauces, and meals
- Environmentally sound: no chemicals
- Great for family pets

## Why Choose the ChargerPro™ HydroSplash™ SYSTEM?

- **Durability and Reliability:** Known for its longevity and minimal maintenance requirements.
- **Consistent Water Quality**
- **Environmentally Friendly**
- **Advanced Technology**

# HydroSplash™

Reverse Osmosis System

Delivering Cleaner, Healthier  
Water Across America

**Qualified System Performance:** Because the performance of an RO Membrane is highly dependent upon pressure, temperature, pH, and TDS, the following should be used for comparison purposes only.

<b>Reverse Osmosis</b>	<b>Model #</b> HS75
	<p><b>HydroSplash RO Drinking Water System</b></p> <p><b>Features:</b></p> <ul style="list-style-type: none"> <li>• Proprietary twist-off filter cartridges</li> <li>• High capacity 75 gpd TFC RO membrane assembly for easy replacement</li> <li>• Ultra conservative 1:1 membrane system</li> <li>• Quick connect o-ring seal fittings</li> <li>• Compact size takes less space than most 4-stage systems</li> </ul>

**Components of this RO System include:**

- An RO manifold assembly
- A drinking water holding tank
- A dispensing faucet
- A feed water saddle valve
- A drain clamp
- Plastic tubing and tube connectors
- An RO membrane module
- Two sediment/carbon modules
- Other items necessary for installation

**Recommended Operating Limits for Feed Water**

Water Pressure	Temperature	pH	Turbidity	TDS
40-100 psi	40-100°F	3-10	<1.0 NTU	1500 ppm max

**Chlorine:** Chlorine will damage a TFC Membrane. The Sediment/Carbon Module has been designed to reduce chlorine from the incoming water. Change filter every 6 to 12 months, more often if the water contains more than 1 ppm chlorine.

**Bacteria:** Must be potable. DO NOT USE WITH WATER THAT IS MICROBIOLOGICALLY UNSAFE OR OF UNKNOWN QUALITY, WITHOUT ADEQUATE DISINFECTION BEFORE THE SYSTEM.
